1	Important Safety Precautions	. 1-2
2	Disassembly method	. 1-6
3	Adjustment	1-19
4	Description of major ICs	1-25

SECTION 1 Important Safety Precautions

1.1 Safety Precautions

- (1) This design of this product contains special hardware and many circuits and components specially for safety purposes. For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Replacement parts must be identical to those used in the original circuits. Services should be performed by qualified personnel only.
- (2) Alterations of the design or circuitry of the product should not be made. Any design alterations of the product should not be made. Any design alterations or additions will void the manufacturers warranty and will further relieve the manufacture of responsibility for personal injury or property damage resulting therefrom.
- (3) Many electrical and mechanical parts in the products have special safety-related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in the Parts List of Service Manual. Electrical components having such features are identified by shading on the schematics and by (⚠) on the Parts List in the Service Manual. The use of a substitute replacement which does not have the same safety characteristics as the recommended replacement parts shown in the Parts List of Service Manual may create shock, fire, or other hazards.
- (4) The leads in the products are routed and dressed with ties, clamps, tubings, barriers and the like to be separated from live parts, high temperature parts, moving parts and/or sharp edges for the prevention of electric shock and fire hazard. When service is required, the original lead routing and dress should be observed, and it should be confirmed that they have been returned to normal, after reassembling.

(5) Leakage shock hazard testing)

After reassembling the product, always perform an isolation check on the exposed metal parts of the product (antenna terminals, knobs, metal cabinet, screw heads, headphone jack, control shafts, etc.) to be sure the product is safe to operate without danger of electrical shock.

Do not use a line isolation transformer during this check.

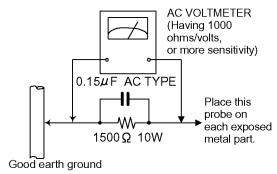

- Plug the AC line cord directly into the AC outlet. Using a
 "Leakage Current Tester", measure the leakage current
 from each exposed metal parts of the cabinet, particularly any exposed metal part having a return path to the
 chassis, to a known good earth ground. Any leakage current must not exceed 0.5mA AC (r.m.s.).
- Alternate check method

Plug the AC line cord directly into the AC outlet. Use an AC voltmeter having, 1,000 ohms per volt or more sensitivity in the following manner. Connect a 1,500 ohm 10W resistor paralleled by a $0.15~\mu F$ AC-type capacitor between an

exposed metal part and a known good earth ground.

Measure the AC voltage across the resistor with the AC voltmeter

Move the resistor connection to each exposed metal part, particularly any exposed metal part having a return path to the chassis, and measure the AC voltage across the resistor. Now, reverse the plug in the AC outlet and repeat each measurement. Voltage measured any must not exceed 0.75 V AC (r.m.s.). This corresponds to 0.5 mA AC (r.m.s.).

1.2 Warning

- (1) This equipment has been designed and manufactured to meet international safety standards.
- (2) It is the legal responsibility of the repairer to ensure that these safety standards are maintained.
- (3) Repairs must be made in accordance with the relevant safety standards.
- (4) It is essential that safety critical components are replaced by approved parts.
- (5) If mains voltage selector is provided, check setting for local voltage.

1.3 Caution

Burrs formed during molding may be left over on some parts of the chassis.

Therefore, pay attention to such burrs in the case of preforming repair of this system.

1.4 Critical parts for safety

In regard with component parts appearing on the silk-screen printed side (parts side) of the PWB diagrams, the parts that are printed over with black such as the resistor (\longrightarrow), diode (\longrightarrow) and ICP (\bigcirc) or identified by the " \triangle " mark nearby are critical for safety.

When replacing them, be sure to use the parts of the same type and rating as specified by the manufacturer. (Except the JC version)

1.5 Safety Precautions (U.K only)

- (1) This design of this product contains special hardware and many circuits and components specially for safety purposes. For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Replacement parts must be identical to those used in the original circuits.
- (2) Any unauthorised design alterations or additions will void the manufacturer's guarantee; furthermore the manufacturer cannot accept responsibility for personal injury or property damage resulting therefrom.
- (3) Essential safety critical components are identified by (\(\triangle \) on the Parts List and by shading on the schematics, and must never be replaced by parts other than those listed in the manual. Please note however that many electrical and mechanical parts in the product have special safety related characteristics. These characteristics are often not evident from visual inspection. Parts other than specified by the manufacturer may not have the same safety characteristics as the recommended replacement parts shown in the Parts List of the Service Manual and may create shock, fire, or other hazards.
- (4) The leads in the products are routed and dressed with ties, clamps, tubings, barriers and the like to be separated from live parts, high temperature parts, moving parts and/or sharp edges for the prevention of electric shock and fire hazard. When service is required, the original lead routing and dress should be observed, and it should be confirmed that they have been returned to normal, after re-assembling.

1.5.1 Warning

- (1) Service should be performed by qualified personnel only.
- (2) This equipment has been designed and manufactured to meet international safety standards.
- (3) It is the legal responsibility of the repairer to ensure that these safety standards are maintained.
- (4) Repairs must be made in accordance with the relevant safety standards.
- (5) It is essential that safety critical components are replaced by approved parts.
- (6) If mains voltage selector is provided, check setting for local voltage.

<u>AUTION</u> Burrs formed during molding may be left over on some parts of the chassis. Therefore, pay attention to such burrs in the case of preforming repair of this system.

1.6 Preventing static electricity

Electrostatic discharge (ESD), which occurs when static electricity stored in the body, fabric, etc. is discharged, can destroy the laser diode in the traverse unit (optical pickup). Take care to prevent this when performing repairs.

1.6.1 Grounding to prevent damage by static electricity

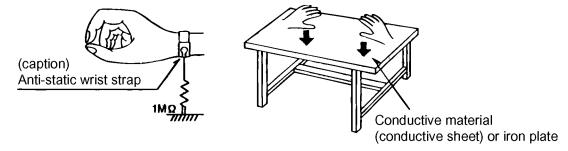

Static electricity in the work area can destroy the optical pickup (laser diode) in devices such as CD players. Be careful to use proper grounding in the area where repairs are being performed.

(1) Ground the workbench

Ground the workbench by laying conductive material (such as a conductive sheet) or an iron plate over it before placing the traverse unit (optical pickup) on it.

(2) Ground yourself

Use an anti-static wrist strap to release any static electricity built up in your body.

(3) Handling the optical pickup

- In order to maintain quality during transport and before installation, both sides of the laser diode on the replacement optical
 pickup are shorted. After replacement, return the shorted parts to their original condition.
 (Refer to the text.)
- Do not use a tester to check the condition of the laser diode in the optical pickup. The tester's internal power source can easily
 destroy the laser diode.

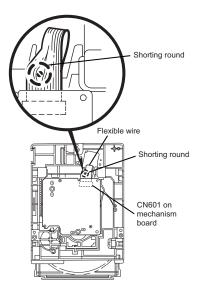

1.7 Handling the traverse unit (optical pickup)

- (1) Do not subject the traverse unit (optical pickup) to strong shocks, as it is a sensitive, complex unit.
- (2) Cut off the shorted part of the flexible cable using nippers, etc. after replacing the optical pickup. For specific details, refer to the replacement procedure in the text. Remove the anti-static pin when replacing the traverse unit. Be careful not to take too long a time when attaching it to the connector.
- (3) Handle the flexible cable carefully as it may break when subjected to strong force.
- (4) It is not possible to adjust the semi-fixed resistor that adjusts the laser power. Do not turn it.

1.8 Attention when traverse unit is decomposed

*Please refer to "Disassembly method" in the text for the CD pickup unit.

- Apply solder to the short land sections before the flexible wire is disconnected from the connector CN101 on the CD servo board. (If the flexible wire is disconnected without applying solder, the CD pickup may be destroyed by static electricity.)
- In the assembly, be sure to remove solder from the short land sections after connecting the flexible wire.

1.9 Important for laser products

- (1) CLASS 1 LASER PRODUCT
- (2) **DANGER**: Invisible laser radiation when open and inter lock failed or defeated. Avoid direct exposure to beam.
- (3) **CAUTION**: There are no serviceable parts inside the Laser Unit. Do not disassemble the Laser Unit. Replace the complete Laser Unit if it malfunctions.
- (4) CAUTION: The compact disc player uses invisible laser radiation and is equipped with safety switches which prevent emission of radiation when the drawer is open and the safety interlocks have failed or are de feated. It is dangerous to defeat the safety switches.
- (5) CAUTION: If safety switches malfunction, the laser is able to function.
- (6) CAUTION: Use of controls, adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.

∆CAUTION

Please use enough caution not to see the beam directly or touch it in case of anadjustment or operation check.

VARNING

Osynlig laserstrålning är denna del är öppnad och spårren är urkopplad. Betrakta ej strålen.

VARO

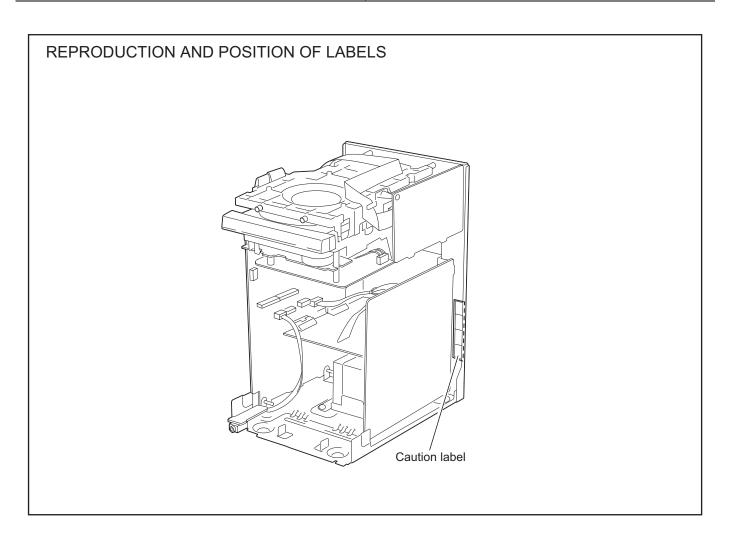

Avattaessa ja suojalukitus ohitettaessa olet alttiina näkymättömälle lasersäteilylle. Älä katso säteeseen.

ADVARSEL

Usynlig laserstråling ved åbning, når sikkerhedsafbrydere er ude af funktion. Undgå udsasttelse for stråling.

ADVARSEL

Usynlig laserstråling ved åpning, når sikkerhetsbryteren er avslott. unngå utsettelse for stråling.

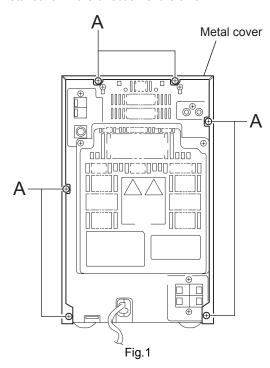

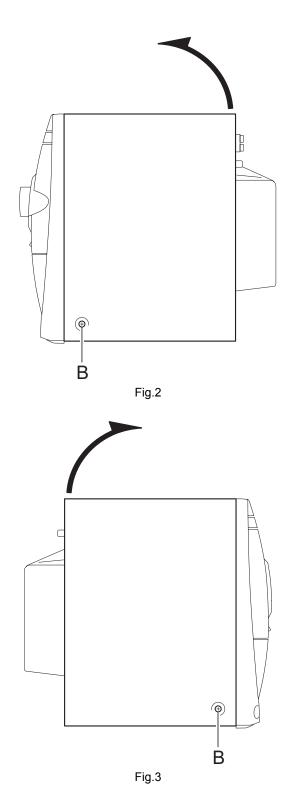

SECTION 2 Disassembly method

2.1 Main body

2.1.1 Removing the metal cover (See Fig.1~3)

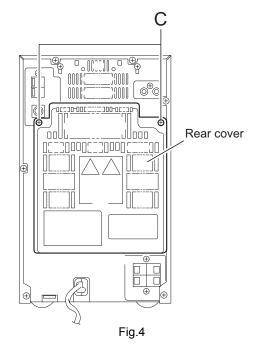

- (1) Remove the six screws **A** on the back of the main body.
- (2) Remove the two screws **B** on each side and remove the metal cover in the direction of the arrow.

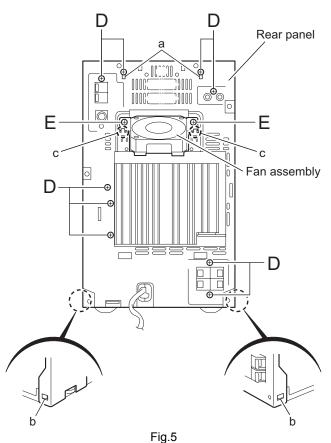

2.1.2 Removing the rear cover (See Fig.4)

(1) Remove the two screws C attaching the rear cover.

2.1.3 Removing the rear panel / fan assembly (See Fig.5,6)

- Prior to performing the following procedure, remove the metal cover and the rear cover.
 - Remove the nine screws D attaching the rear panel. Release the two joints a on the rear side and the two joints b on each side.
 - (2) Remove the two screws **E** attaching the fan bracket and release the two joints **c** on the rear panel, and remove.
 - (3) Disconnect the wire from the connector CN916 on the main board.

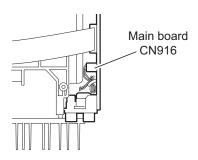

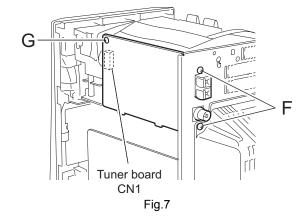

Fig.6

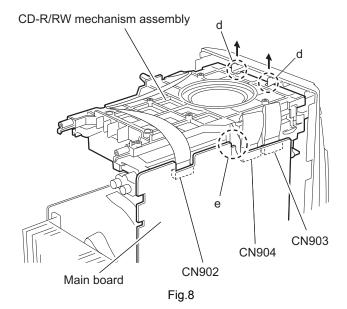

2.1.4 Removing the tuner board (See Fig.7)

- Prior to performing the following procedure, remove the metal cover.
 - (1) Disconnect the card wire from the connector CN1 on the tuner board.
 - (2) Remove the two screws ${\bf F}$ on the rear side and the screw ${\bf G}$ in the side.

2.1.5 Removing the CD-R/RW mechanism assembly (See Fig.8)

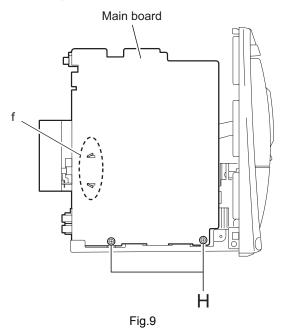

- Prior to performing the following procedure, remove the metal cover, the rear cover, the rear panel and the tuner board.
 - (1) Disconnect the card wire from the connector CN903, CN902 and CN904 on the main board.
 - (2) Pull the joint **d** in the direction of the arrow and remove the CD-R/RW mechanism assembly backward while releasing the joint **e** .

2.1.6 Removing the main board / the heat sink board / the speaker jack board

(See Fig.9~11)

- · Prior to performing the following procedure, remove the metal cover, the rear cover, the rear panel, the tuner board and the CD-R/RW mechanism assembly.
 - (1) Remove the two screws **H** attaching the main board.
 - (2) Disconnect the card wire from the connector CN900,CN901,CN930,CN931 and CN932, and disconnect the flat wire from the connector CN913, CN917 and CN918 on the main board.
 - (3) Remove the band and disconnect the flat wire from the connector CN951 on the power transformer assembly, and then remove the main board / the heat sink board from the body.
 - (4) Release the two joints **f** of the main board and disconnect the connector CN944 and CN945 of the heat sink board from the connector CN912 and CN911 of the main board respectively, and remove.

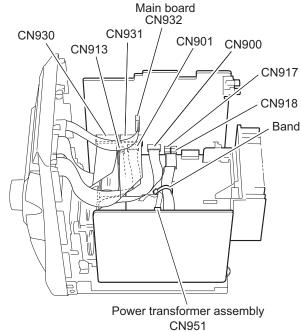

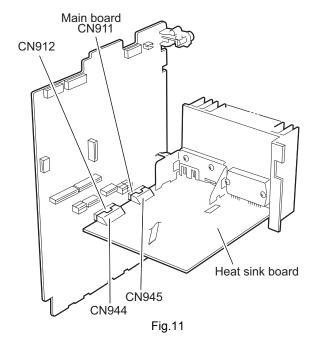

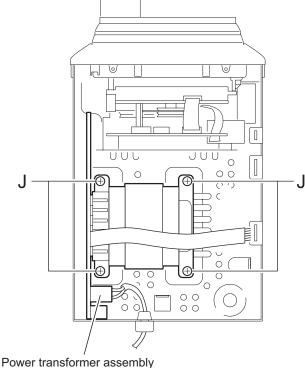

Fig.10

2.1.7 Removing the power transformer assembly (See Fig.12)

- Prior to performing the following procedure, remove the metal cover, the rear cover, the rear panel, the CD-R/RW mechanism assembly and the main board.
 - (1) Disconnect the power cord from the connector J1000 on the power transformer assembly.
 - (2) Remove the four screws J.

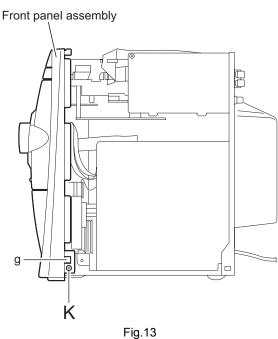

J1000

Fig.12

2.1.8 Removing the front panel assembly (See Fig.13,14)

- Prior to performing the following procedure, remove the metal cover.
 - (1) Remove the two screws ${\bf K}$ on each side. Release the two joints ${\bf g}$ on the both sides and lift the front panel assembly to release the joint ${\bf h}$.
 - (2) Disconnect the card wire from the connector CN900, CN901, CN930, CN931 and CN932 on the main board.

Main board
CN931 CN932 CN930

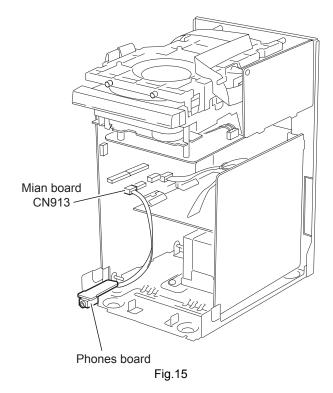

CN900 CN901 K

Front panel assembly

Fig.14

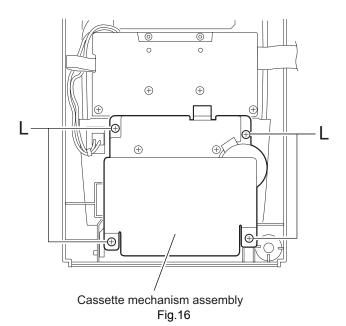

2.1.9 Removing the phones board (See Fig.15)

- Prior to performing procedure, remove the metal cover and the front panel assembly.
 - (1) Disconnect the flat wire from the connector CN913 on the main board.

2.1.10 Removing the cassette mechanism assembly (See Fig.16)

- Prior to performing the following procedure, remove the metal cover and the front panel assembly.
 - (1) Remove the four screws **L** attaching the cassette mechanism assembly.

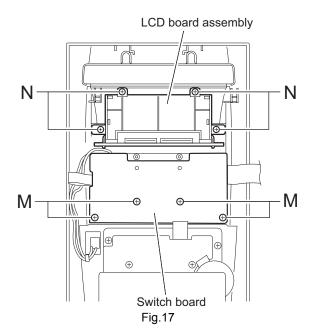

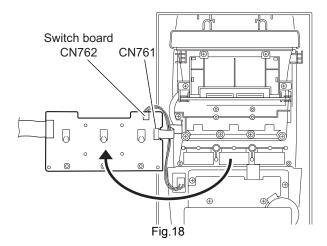

2.1.11 Removing the switch board (See Fig.17,18)

- Prior to performing the following procedure, remove the metal cover and the front panel assembly.
 - (1) Remove the four screws **M** attaching the switch board.
 - (2) Move the switch board in the direction of the arrow to disconnect the wire from the connector CN762 and the card wire from the connector CN761.

2.1.12 Remove the LCD board assembly (See Fig.17)

- Prior to performing the following procedure, remove the metal cover and the front panel assembly.
 - (1) Remove the four screws ${\bf N}$ attaching the LCD board assembly.

2.1.13 Removing the control panel assembly (See Fig.19,20)

- Prior to performing the following procedure, remove the metal cover, the front assembly, the switch board and the LCD board assembly.
 - (1) Remove the three screws **O** attaching the control panel assembly.
 - (2) Release the three joints $\,i\,$ and open the cassette door while pressing the cassette door, and then remove the control panel assembly in the direction of the arrow.

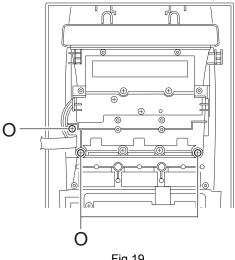

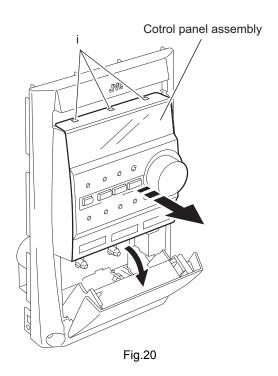

Fig.19

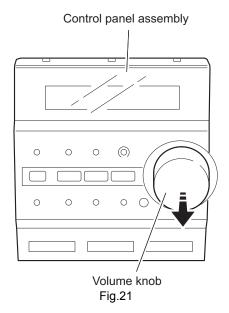

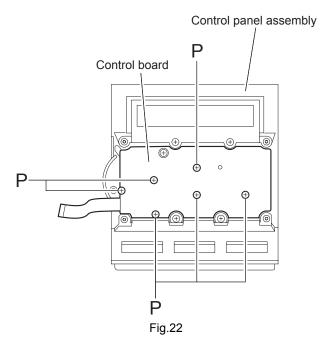

2.1.14 Remiving the control board (See Fig.21,22)

- Prior to performing the following procedure, remove the metal cover, the front panel assembly, the switch board, the LCD board assembly and the control panel assembly.

 (1) Pull out the volume knob.

 - (2) Remove the six screws **P** attaching the control board.

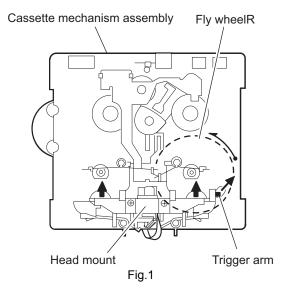

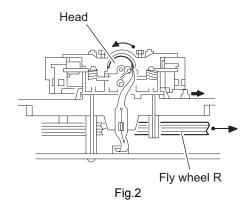

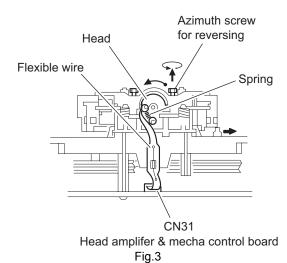

2.2 Cassette mechanism assembly

2.2.1 Removing the Play/Record & Clear head (See Fig.1~3)

- (1) While moving the trigger arm on the right side of the head mount in the direction of the arrow, turn the flywheel R counterclockwise until the head mount comes ahead and clicks.
- (2) The head turns counterclockwise as you turn the flywheel R counterclockwise (See Fig.2 and 3).
- (3) Disconnect the flexible wire from connector CN31 on the head amplifier & mechanism control board.
- (4) Remove the spring from the back of the head.
- (5) Loosen the azimuth screw for reversing attaching the head.
- (6) Remove the head on the front side of the head mount.

2.2.2 Removing the head amplifier & mechanism control board (See Fig.4)

- (1) Turn over the cassette mechanism assembly and remove the three screws A attaching the head amplifier & mechanism control board.
- (2) Disconnect the flexible wire from connector CN31 on the head amplifier & mechanism control board.
- (3) Disconnect connector CN32 of the head amplifier & mechanism control board from connector CN1 on the reel pulse board.REFERENCE: If necessary, unsolder the 4-pin wire soldered to the main motor.

2.2.3 Removing the main motor (See Fig.4~7)

- (1) Remove the two screws B.
- (2) Half raise the motor and remove the capstan belt from the motor pulley.

ATTENTION:

Be careful to keep the capstan belt from grease. When reassembling, refer to Fig.6 and 7 for attaching the capstan belt.

Head amplifier & mecha control board

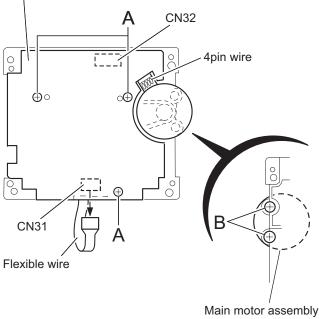

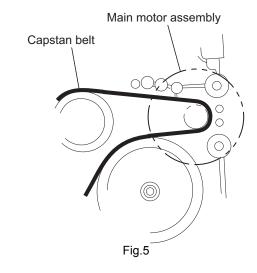

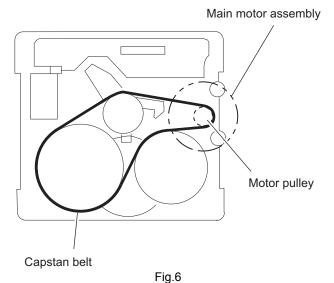

Fig.4

Main motor assembly

Fly wheel

Capstan belt

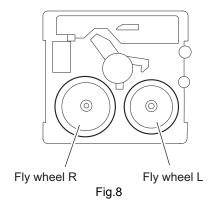

Motor pulley

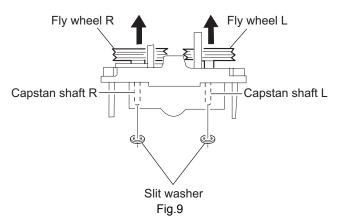

Fig.7

1-16 (No.22032)

2.2.4 Removing the flywheel (See Fig.8, 9)

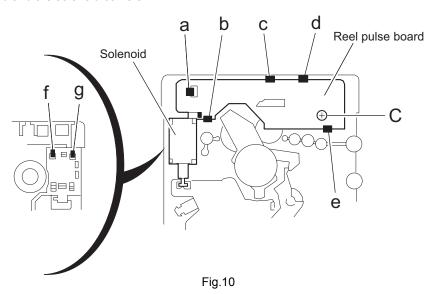

- Prior to performing the following procedure, remove the head amplifier & mechanism control board and the main motor assembly.
 - (1) From the front side of the cassette mechanism, remove the slit washers attaching the capstan shaft **L** and **R**. Pull out the flywheels backward.

2.2.5 Removing the reel pulse board and solenoid (See Fig.10)

- Prior to performing the following procedure, remove the head amplifier & mechanism control board.
 - (1) Remove the screw C.
 - (2) Release the tab a, b, c, d and e retaining the reel pulse board.
 - (3) Release the tab **f** and **g** attaching the solenoid on the reel pulse board.
 - (4) The reel pulse board and the solenoid come off.

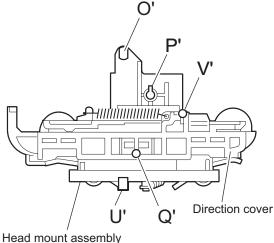

2.2.6 Reattaching the Play/ Record & Clear head (See Fig.11~13)

- (1) Reattaching the head mount assembly.
 - a) Change front of the direction cover of the head mount assembly to the left (Turn the head forward).
 - b) Fit the bosses O', P', Q', U' and V' on the head mount assembly to the holes P and V, the slots O, U and Q of the mechanism sub assembly (See Fig.11 to 13).

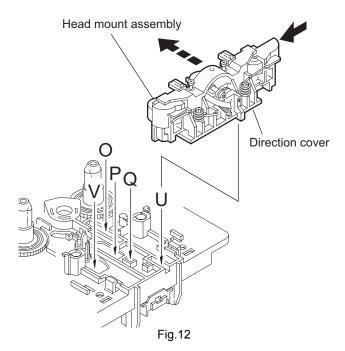

CAUTION:

To remove the head mount assembly, turn the direction cover to the left to disengage the gear. If the gear can not be disengaged easily, push up the boss **Q'** slightly and raise the rear side of the head mounts slightly to return the direction lever to the reversing side.

- (2) Tighten the azimuth screw for reversing.
- (3) Reattach the spring from the back of the Play/ Record & Clear head.
- (4) Connect the flexible wire to connector CN31 on the head amplifier & mechanism control board.

ead mount assembly Fig.11

SECTION 3 Adjustment

3.1 Adjustment method

■ Measurement Instruments Required for Adjustment

1. Low frequency oscillator This oscillator should have a capacity to output 0dBs to 600Ω at an oscillation frequency of 50Hz-20kHz.

- 2. Attenuator impedance : 600Ω
- 3. Electronic voltmeter
- 4. Distortion meter
- 5. Frequency counter
- 6. Wow & flutter meter
- 7. Test tape

VT703L: Head azimuth

VT712: Tape speed and running unevenness (3kHz)

VT724 : Reference level (1kHz)

8. Blank tape

TYPE I : AC-225 TYPE II: AC-514

9. Torque gauge: For play and back tension FWD(TW2111A), REV(TW2121a) and FF/REW(TW2231A)

10. Test disc: CTS-1000

Measurement conditions

Power supply voltage AC 230V ~, 50Hz

Reference output : Speaker : $0.775V/4\Omega$

: Headphone : $0.077V/32\Omega$

Reference frequency and

input level ----- 1kHz, AUX: -8dBs Measurement output terminal ----- at Speaker J3002 X Load resistance ----- 4Ω

Radio Input signal

AM frequency 400Hz
AM modulation 30%
FM frequency 400Hz
FM frequency deviation 22.5kHz

Tuner section

FM tuning range: 87.5MHz~108.00MHz AM tuning range: 522kHz~1,629kHz

Voltage applied to tuner ----- +B: DC5.7V VT : DC 12V

Reference measurement

output ----- 26.1mV(0.28V)/3 Ω Input positions ----- AM : Standard loop antenna FM: TP1 (hot) and TP2 (GND)

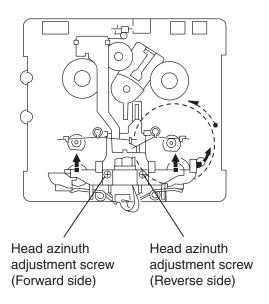

Standard measurement position of volume

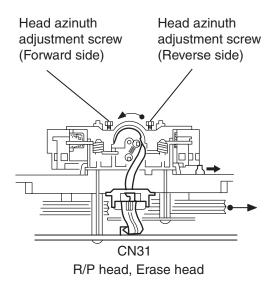

Function switch	to lape
Beat cut switch	to Cut
Super Bass/Active hyper Bass	to OFF
Bass Treble	to Center
Adjustment of main volume to referen	ce output
	VOL: 28

Precautions for measurement

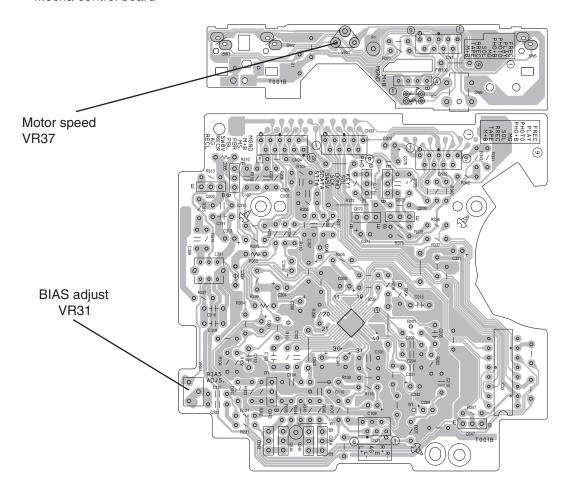

- 1. Apply 30pF and 33k Ω to the IF sweeper output side and 0.082 μ F and 100k Ω in series to the sweeper input side.
- 2. The IF sweeper output level should be made as low as possible within the adjustable range.
- 3. Since the IF sweeper is a fixed device, there is no need to adjust this sweeper.
- 4. Since a ceramic oscillator is used, there is no need to perform any MIX adjustment.
- 5. Since a fixed coil is used, there is no need to adjust the FM tracking.
- 6. The input and output earth systems are separated. In case of simultaneously measuring the voltage in both of the input and output systems with an electronic voltmeter for two channels, therefore, the earth should be connected particularly carefully.
- 7. In the case of BTL connection amp., the minus terminal of speaker is not for earthing. Therefore, be sure not to connect any other earth terminal to this terminal. This system is of an BTL system.
- 8. For connecting a dummy resistor when measuring the output, use the wire with a greater code size.
- 9. Whenever any mixed tape is used, use the band pass filter (DV-12).

3.2 Cassette mechanism adjustment

Mecha control board

3.2.1 Mechanism section

Item	Condition	Measurement method	Ref.value	Adjustment position
Head azimuth	Test tape : VT703L (8kHz) Output terminal : Speaker out	1.Playback the test tape VT703L (8kHz). 2.Adjust to maximum output level by azimuth adjustment screw for forward side and reverse side. 3.This adjustment is adjust by adjustment screw of forward side and adjustment screw of reverse side.	Maximum output	Only adjust at changed head
Tape speed	Test tap : VT712 (3kHz) Output terminal : Speaker out or Headphone out	Playback the test tape VT712 (3kHz) at end of forward side, adjust to 2,940~3,90Hz indication of frequency counter by VR37.	2,940 ~ 3,090Hz	VR37

Item	Condition	Measurement method	Ref.value	Adjustment position
Tape speed diviation at FWD/REV	Test tape : VT712 (3kHz) Output terminal : Speaker out or Headphone out	Playback the test tape VT712 (3kHz) at end of forward and reverse, tape speed deviation should be less than 6.0Hz.	Leass than 6.0Hz	VR31
Wow & Flutter	Test tape : VT712 (3kHz) Output terminal : Speaker out or Headphone out	Playback the test tape VT712 (3kHz) at start of forward and reverse, Wow & Flutter are should be less than 0.25%(WRMS).	Less than 0.25% (WRMS)	

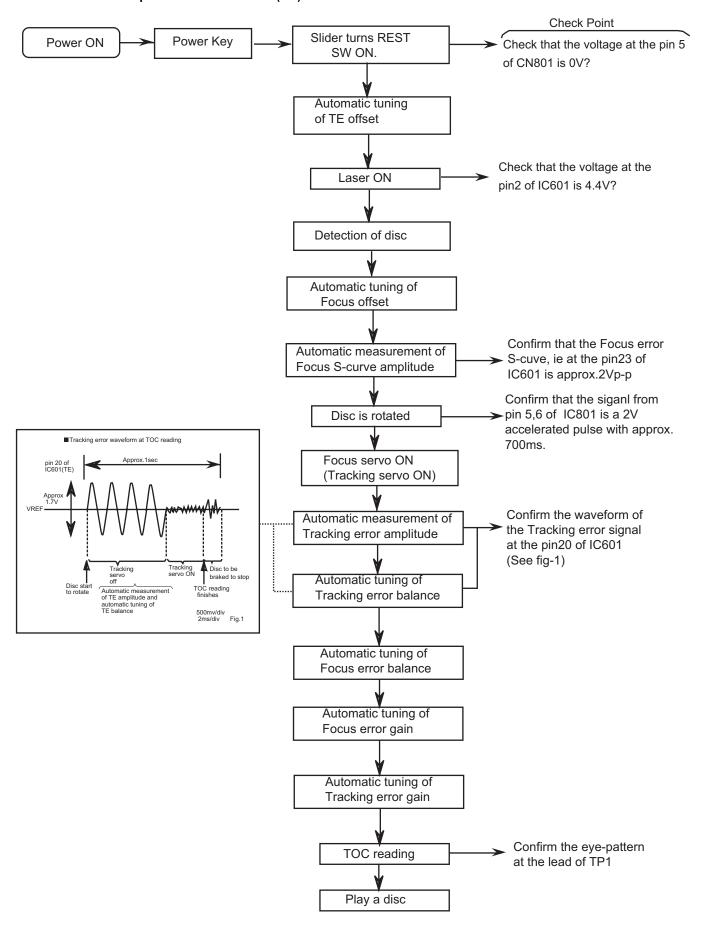

3.2.2 Electrical adjustment

Item	Condition	Measurement method	Ref.value	Adjustment position
Recording BIAS adjustment	• Forward or Reverse • Test tape :AC-514 TYPE II :AC-225 TYPE I • Output terminal Recording head	 Set the test tape(AC-514 TYPEII and AC-225 TYPEI), then make REC/PAUSE condition. Connect 100 Ω to recording head by series, then connect to VTVM for measurement the current. After setting, start the recording by release the PAUSE, in this time bias current adjust to next fig. by VR31 for Lch and VR32 for Rch. μA (TYPE II) and 4.20 μA (TYPEI). 	AC-225 :4.20μA AC-514 :4.0μA	VR31
R/P playback frequency response	*Reference frequency : 1kHz / 10kHz (Reference: -20dB) *Test tape : AC-514 TYPE II *Input terminal : OSC IN	 1.Set the test tape (AC-514 TYPE II), then make REC/PAUSE condition. 2.Release the PAUSE, then start recording the 1kHz and 10kHz of reference frequency from oscillator. 3.Playback the recorded position, 1kHz and 10kHz output deviation should -1dB±2dB to readjust by VR31 for Lch and VR32 for Rch. 	Output deviation 1kHz/10kHz :-1dB±2dB	VR31

3.2.3 Electrical response confirmation

Item	Condition	Measurement method	Ref.value	Adjustment position
Recording bias current -Test tape : TYPE II (AC-514) - Measurement terminal : BIAS test point on printed circuit board		 1.Change BIAS1 and 2, confirm the frequency should be change. 2.Set the test tape (AC-514 TYPE II), then make REC/PAUSE condition. 3.Confirm the frequency should 100Hz± 6kHz at BIAS test point on printed circuit board. 	100 kHz ±6 kHz	
Erase current (reference value) Forward or Reverse Rec condition Test tape : AC-514 TYPEII : AC-225 TYPEI • Measurement terminal : Both side of Erase head		1.Set the test tape (AC-514 TYPE II and AC-225 TYPE I), then make REC/PAUSE condition. 2.Release the PAUSE to REC condition, connect 1W to ERASE head by series, then confirm the erase current at both side of erase head.	TYPE II : 120 mA TYPEI : 75 mA	

3.3 Flow of functional operation until TOC read (CD)

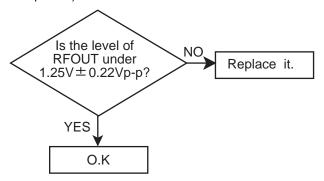

3.4 Maintenance of laser pickup (CD)

- (1) Cleaning the pick up lens
 - Before you replace the pick up, please try to clean the lens with a alcohol soaked cotton swab.
- (2) Life of the laser diode

When the life of the laser diode has expired, the following symptoms will appear.

 The level of RF output (EFM output: ampli tude of eye pattern) will be low.

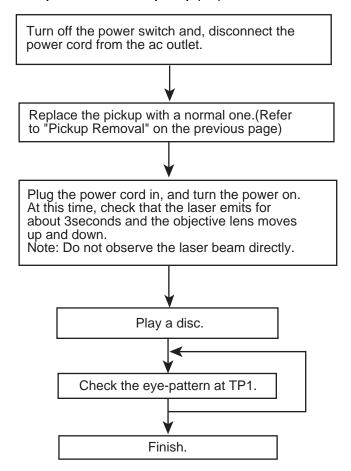

(3) Semi-fixed resistor on the APC PC board

The semi-fixed resistor on the APC printed circuit board which is attached to the pickup is used to adjust the laser power. Since this adjustment should be performed to match the characteristics of the whole optical block, do not touch the semi-fixed resistor.

If the laser power is lower than the specified value, the laser diode is almost worn out, and the laser pickup should be replaced. If the semi-fixed resistor is adjusted while the pickup is functioning normally, the laser pickup may be damaged due to excessive current.

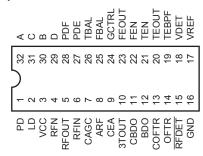

3.5 Replacement of laser pickup (CD)

0	1	0	1	COUNTER-CLOCKWISE
1	1	0	0	Brake

4.6 LA1838 (IC1): FM AM IF AMP&detector, FM MPX Decoder

• Block Diagram

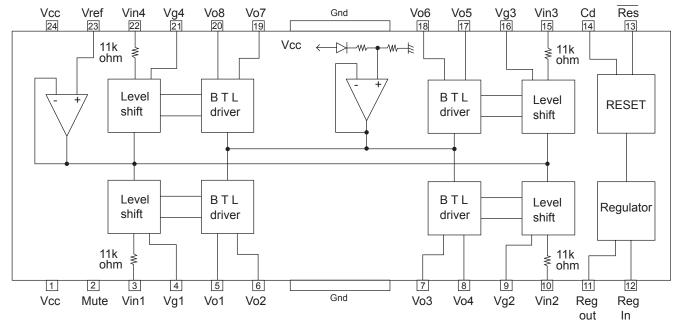

Pin Function

Pin No.	Symbol	I/O	Function
1	FM IN	ı	This is an input terminal of FM IF signal.
2	AM MIX	0	This is an out put terminal for AM mixer.
3	FM IF	ı	Bypass of FM IF
4	AM IF	ı	Input of AM IF Signal.
5	GND	-	This is the device ground terminal.
6	TUNED	0	When the set is tunning,this terminal becomes "L".
7	STEREO	0	Stereo indicator output. Stereo "L", Mono: "H"
8	VCC	-	This is the power supply terminal.
9	FM DET	-	FM detect transformer.
10	AM SD	-	This is a terminal of AM ceramic filter.
11	FM VSM	0	Adjust FM SD sensitivity.
12	AM VSM	0	Adjust AM SD sensitivity.
13	MUTE	I/O	When the signal of IF REQ of IC121(LC72131) appear, the signal of FM/AM IF output. //Muting control input.
14			Change over the FM/AM input. "H" :FM, "L" : AM
15	FM/AM	0	Stereo: "H", Mono: "L"
16	MONO/ST L OUT	0	Left channel signal output.
17	R OUT	0	Right channel signal output.
18	LIN	-	Input terminal of the Left channel post AMP.
19		!	·
	R IN	1	Input terminal of the Right channel post AMP.
20	RO	0	Mpx Right channel signal output.
21	LO	0	Mpx Left channel signal output.
22	MPX IN	1	Mpx input terminal
23	FM OUT	0	FM detection output.
24	AM DET	0	AM detection output.
25	AM AGC	ı	This is an AGC voltage input terminal for AM
26	AFC	-	This is an output terminal of voltage for FM-AFC.
27	AM RF	I	AM RF signal input.
28	REG	0	Register value between pin 26 and pin28 besides the frequency width of the input signal.
29	AM OSC	-	This is a terminal of AM Local oscillation circuit.
30	OSC BUFFER	0	AM Local oscillation Signal output.

4.7 LA6541-X (IC801) : Servo driver

Pin No.	Symbol	Description		
1	Vcc	Power supply (Shorted to pin 24)		
2	Mute	All BTL amplifier outputs ON/OFF		
3	Vin1	BTL AMP 1 input pin		
4	Vg1	BTL AMP 1 input pin (For gain adjustment)		
5	Vo1	BTL AMP 1 input pin (Non inverting side)		
6	Vo2	BTL AMP 1 input pin (Inverting side)		
7	Vo3	BTL AMP 2 input pin (Inverting side)		
8	Vo4	BTL AMP 2 input pin (Non inverting side)		
9	Vg2	BTL AMP 2 input pin (For gain adjustment)		
10	Vin2	BTL AMP 2 input pin		
11	Reg Out	External transistor collector (PNP) connection. 5V power supply output		
12	Reg In	External transistor (PNP) base connection		
13	Res	Reset output		
14	Cd	Reset output delay time setting (Capacitor connected externally)		
15	Vin3	BTL AMP 3 input pin		
16	Vg3	BTL AMP 3 input pin (For gain adjustment)		
17	Vo5	BTL AMP 3 output pin (Non inverting side)		
18	Vo6	BTL AMP 3 output pin (Inverting side)		
19	Vo7	BTL AMP 4 output pin (Inverting side)		
20	Vo8	BTL AMP 4 output pin (Non inverting side)		
21	Vg4	BTL AMP 4 output pin (For gain adjustment)		
22	Vin4	BTL AMP 4 output pin		
23	Vref	Level shift circuit's reference voltage application		
24	Vcc	Power supply (Shorted to pin 1)		

4.8 LC72136N (IC2): PLL frequency synthesizer

Pin No.	Symbol	I/O	Function
1	XT	Ι	X'tal oscillator connect (75kHz)
2	FM/AM	0	LOW:FM mode
3	CE	I	When data output/input for 4pin(input) and 6pin(output): H
4	DI	I	Input for receive the serial data from controller
5	CLOCK	I	Sync signal input use
6	DO	0	Data output for Controller Output port
7	FM/ST/VCO	0	Low: MW mode
8	AM/FM	0	Open state after the power on reset
9	LW	I/O	Input/output port
10	MW	I/O	Input/output port
11	SDIN	I/O	Data input/output
12	IFIN	I	IF counter signal input

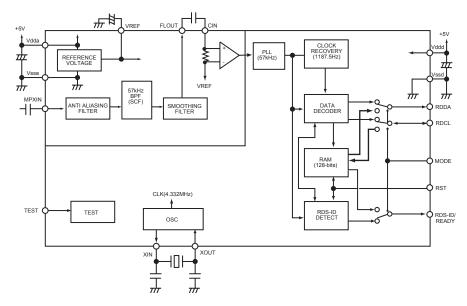

Pin No.	Symbol	I/O	Function
13	IFCONT	0	IF signal output
14		-	Not use
15	AMIN	I	AM Local OSC signal output
16	FMIN	I	FM Local OSC signal input
17	VCC	-	Power suplly(VDD=4.5-5.5V) When power ON:Reset circuit move
18	PD	0	PLL charge pump output (H: Local OSC frequency Height than Reference frequency.L: Low Agreement: Height impedance)
19	LPFIN	I	Input for active lowpassfilter of PLL
20	LPFOUT	0	Output for active lowpassfilter of PLL
21	GND	-	Connected to GND
22	XT	I	X'tal oscillator(75KHz)

4.9 LC72723(IC3): RDS demodulation

Block diagram	2-1
Standard schematic diagrams	
<u> </u>	
Printed circuit boards	2-9~11

In regard with component parts appearing on the silk-screen printed side (parts side) of the PWB diagrams, the parts that are printed over with black such as the resistor (—), diode (—) and ICP (—) or identified by the "A" mark nearby are critical for safety. (This regulation does not correspond to J and C version.)
